I think it is disgusting when certain groups and lobbyist put the almighty dollar ahead of the safety of thousands of people who are able to get instant information on road and weather conditions to keep the flow of goods and people moving across this great nation.

I have been in many areas of this country where I could not get an AM/FM signal for hours at a time, I had no idea what lay ahead, with the XM radio I am able to get the information I need to deliver my Load safely and on time.

How would you like to fly on an Airplane where the Pilot had to get his weather information from an AM/FM radio station??
